Panasonic® Voltage Detectors

Highly Reliable, Easy-to-Use CMOS LSI is for Voltage Detection

The MN1380 Series is a series of devices with functions for:

- Monitoring the power supply voltage supplied to microcomputers and to LSI systems
- Generating the RESET signal for carrying out initialization when the power supply is turned ON
- Preventing runaway in systems when the power supply voltage fluctuates. Recently, there has been an increase in the number of battery-driven products such as cordless telephones, notebook-type personal computers, etc. In these products, highly accurate monitoring of the power supply voltage is an important point in terms of system operation and data backup. While maintaining the voltage detection precision of similar voltage detection devices so far, the MN1380 Series of devices consumes 1/10 the current. In addition, users can choose from one of three output formats: CMOS output, N-channel open drain and inverted CMOS output.

Texas Instruments

NEW! Power Factor Correction (PFC) and Motor Control Development Kit

The High Voltage Motor Control and PFC Developer's Kit provides an easy, open source way to evaluate the Piccolo microcontroller and TI analog in a high voltage environment. A single Piccolo MCU controls the power factor correction (PFC) stage and the motor control stage. The PFC takes a line level AC input (approximately 110 ~ 240VAC) and outputs up to 750 watts of power, regulated by closed loop control.

The motor driver stage can be driven from either the PFC or from a separate power stage and accepts up to 400V and outputs up to 1.5 kilowatt of power. The motor driver stage can drive the three most common types of brushless motors, AC induction, brushless DC, and permanent magnet synchronous motors. The Piccolo microcontroller controls each type of motor using closed loop, sensorless control.

Portescap Stepper Motors

These stepper motors are very precise DC motors that move a specific degree of rotation with each pulse applied to its coils. Stepper motors can be controlled for either clockwise or counterclockwise rotation and can operate at very high speeds. Shaft speed is not affected by variations in torque. Unipolar motors have two coils wound on the same bobbin (4 coils total) where each winding is sequentially energized. Bipolar motors have only two windings and require a push-pull driver to operate. MNM is millinewton meter.

Operating Specifications:

- Operating Temperature Range: -20°C ~ 70°C • Bearing Type: Bronze sleeve • Lead Wires: 26AWG (22AWG for 23H series)

AC/DC Geared Motors

105 Series AC Gear Motor:
Unidirectional operation assured by ball and slot “no-back” system. Motors listed are all clockwise rotation when facing the output shaft. Characteristics: Rotor Speed 600 RPM, 120VAC, 60Hz Coil, 2.7 Watts, -20°C ~ 55°C Operating Temperature. Motor develops 300oz-in. Torque starting and running at 1 RPM. To determine torque available on motors shown, divide 300oz-in by listed motor speed.

6100 Hysteresis Series Motor:
Provides smooth quiet performance and allows operation to a stall condition without damage or an increase in temperature. Perfect for HVAC controls, Automatic Teller Machines and other applications. Motors listed are all counter clockwise rotation when facing the output shaft.

800I Series DC Gear Motor:
Basic 2400 and 4800 armature speed used. Geartrain rating 30oz-in dynamic, 90oz-in static. Starting and running torque 60oz-in at 1 RPM. These ratings are conventionally stated for output geared to 1 RPM. Motor output speed will be higher if load is less than 30oz-in Voltages offered 12VDC and 24VDC. DC motors rotation are reversible by reversing polarity at terminals.

Peltier Modules

RoHS COMPLIANT

CUI Peltier Modules provide a convenient and reliable cooling solution. Their compact size make them ideal for applications that are size or weight limited and in applications where heat sinks, compressors or fans wouldn't be feasible. They can be operated in any orientation, do not require the use of chlorofluorocarbons and have no moving parts so they are virtually maintenance free. They are great for use in many demanding industries such as medical, laboratory, aerospace, semiconductor, telecom, industrial, and consumer products.

Current and Sense Monitors

The ZXCT range of high side current monitors and current sense amplifiers provides elegant design solutions for current measurement and power control.
ZXCT1009: This current sensing monitor takes a high side voltage developed across a current shunt resistor and translates it into a scaled ground referenced current. **ZXCT1010:** Offers reduced typical offset and improved accuracy at low sense voltages. **ZXCT1021/1022:** These current sense amplifiers are particularly suited to low sense voltage applications.

Analog Video Products

The Zetex range of video solutions has been expanded by the addition of a sync separator and a DC restore amplifier. **ZXFV4583:** Separates out the embedded sync information from PAL, NTSC, SECAM and other analog video signals. **ZXFV4089:** Uses a sync pulse (typically from a sync separator) to restore the video black level to the correct DC voltage. The high speed amplifiers/buffers include quad and single amplifiers plus multi-channel unity-gain buffers. **ZXFV202:** Single video amplifier is available in SOT23 and SO8 offering superb differential gain and phase performance of 0.01%/0.01° respectively. **ZXFV301N16:** 4:1 multiplexers are for use in video and other high speed applications. With greater versatility, they have different channel selection plus an output enable.

Photovoltaic Isolators

The Photovoltaic Isolator (PVI) generates an electrically isolated DC voltage upon receipt of a DC input signal. The PVI is capable of directly driving gates of power MOSFETs or IGBTs. **Features:** • Isolated voltage source • Monolithic construction • Up to 8μA output • Single or Dual output • Solid-state reliability • Operating Temperature Range: -40 ~ 85°C **Applications:** • Load distribution • Industrial controls • Current-to-Voltage conversion • Custom solid-state relay

HexFred Diodes

HEXFRED technology sets a new standard for high performance ultrafast diodes. This performance advantage can be utilized by the designer resulting in higher efficiency circuits and lower overall system cost. HEXFREDS will: • Allow IGBTS and MOSFETS to run cooler by 10°C, 20°C • Improve overall system efficiency by 1%, 2% • Reduce noise and the need for snubber circuitry • Allow for higher frequency operation • Allow many marginal circuits to work more reliably

NEW! eGaN™ Enhancement Mode Power Transistors

Features: GaN's exceptionally high electron mobility and low temperature coefficient allows very low RDS(ON), while its lateral device structure and majority carrier diode provide exceptionally low QG and zero QRR. The end result is a device that can handle tasks where very high switching frequency, and low on-time are beneficial as well as those where on-state losses dominate.

Benefits: • Ultra High Efficiency • Ultra Low RDS(on) • Ultra low QG • Ultra small footprint

Applications: • High Speed DC-DC conversion • Class D Audio • Hard Switched and High Frequency Circuits

FAIRCHILD
SEMICONDUCTOR®

Surface Mount and Through-Hole Power IGBTs

Digi-Reel® RoHS COMPLIANT

Fairchild's IGBT's are designed to replace 500V/600V MOSFETs in switch mode power supply (SMPS), Power Factor Correction (PFC) and other high-power applications without redesign of the gate drive voltage circuitry. SMPS IGBT's are the first-in-class to have full unclamped inductive switching (UIS) capability similar to power MOSFETs, allowing application in all power circuit topologies, including single-switch forward converters. The gate drive voltage requirement has been reduced to 8 ~ 10V, allowing for the replacement of larger die-size power MOSFETs or multiple MOSFETs in parallel.
